

For this lab session please do the followings:

- 1- On Moodle, download the file named “Lab 2 simple carshop application” and run it.
- 2- Based on lecture 2, identify at least 1 attribute for each of the Software Quality Attributes (**functional, operational, usability, business and structural**) that you think is appropriate for the application to be tested.
- 3- Provide reasons for your attribute selection.
- 4- Identify the feature or functionality in the application that is related to each of the attributes you have identified.
- 5- For each attribute provide a step-by-step process to test it based on your own understanding and experience.

Note:

- 1- You can work in the same groups as your assignment
- 2- Document your work in a word file, convert it to pdf and then submit it via Moodle by 11:59 pm, 26/09/2025
